## MESSAGE

The issue of agricultural productivity, nutritional security and environmental sustainability need pressing and paramount scientific intervention at every level. It is also very vital to modernize all existing agricultural practices to ensure food security through adequate availability, accessibility, sustainable utilization and reinvent global capabilities for agricultural development and food production through innovative technologies fuelled with financial investments. In this set-up, scientific community has an essential role in informing available modern ideas to establish sustainable agricultural production systems with reduced greenhouse gas emissions and to make the best possible use of existing resources with most suitable land management practices.

I am extremely delighted to know that the Integral Institute of Agricultural Science and Technology in collaboration with U.P. Council of Agricultural Research are organizing an “International Congress on Post-Harvest Technology of Agricultural Produce for Sustainable Food and Nutritional Security” on November 10-12, 2016 with the avowed aim to explore new trends on post harvest technologies in agriculture and link them with sustainable food and nutritional security.

I earnestly hope that this congress will be quite useful in disseminating the innovative ideas for the propagation and communication of post harvest technologies at the ground level to meet the food demand of rising global population by increasing agricultural productivity, while ensuring environmental sustainability.

I also extend my best wishes to all the participants and organizers for grand success in this academic/scientific endeavour.
