MESSAGE

I am very happy to know that “**International Congress on Post-Harvest Technologies of Agricultural Produce for Sustainable Food and Nutritional Security**” is being organized by Integral Institute of Agricultural Science and Technology (IIAST), Integral University, Lucknow.

I am very confident that the congress will bring forward the researchers from all over the world for a healthy discussion on the new trends on post harvest technologies in agriculture, sustainable food and nutritional security. This will provide a much needed program for exchange of the meaningful dialogues among expertise of field, innovative ideas as well as propagation of new ideas to our farmers. There is desire for the propagation and communication of post harvest technologies at the ground level to meet the food demand of the rising global population. The development of the new technologies for the farmers is seen as one of the most accessed solutions to the problems of food and agriculture in India. I am positive enough to state that the congress will certainly going to serve as a starting point for a more in-depth conversation among scientists, consumers, industries, farmers and government about the near and long-term uses of innovative ideas in the field of post harvest technologies of agricultural produce.

I wish to convey my hearty congratulations to all the members of the Integral University and Uttar Pradesh Council for Agricultural Research by wishing them a grand success. I also extend my best wishes and compliments to all the organizers of the congress and wish that the deliberations will prove to be quite fruitful to the agricultural agencies, scientists, policy makers as well as participants.

I wish the International Congress a grand success.

(Ashutosh Sharma)
